2-WAY DIRECT ACTING WATER REGULATING VALVE WITH THERMOSTATIC ACTUATOR

PAGE 3 OF 4

2-WAY TEMPERATURE REGULATOR TYPICAL APPLICATION

Thermostatic actuated valves are typically used to modulate the water flow in response to a temperature signal and are used in a wide variety of industrial and commercial process control applications where water is used as a heat transfer medium. For example, this type of valve is used to maintain precise control of the temperature of Hydraulic fluid in plastic injection molding Equipment.

INSTALLATION INSTRUCTIONS

- 1) Valves can be mounted in any position without affecting performance. However, for ease of adjustment consider the accessibility of the adjusting screw.
- 2) Connect the incoming water line to the valve inlet. Direction of water flow (see drawing) is indicated by the arrow cast on the side of the valve body.
- 3) Insert / Install sensing bulb in desired location.

GENERAL DESCRIPTION _

The 800 series valves are direct acting, modulating water regulating valves utilizing a diaphragm construction to give a smooth, well balanced action. The pressure-balanced design and low frictional coefficient of the diaphragm assure fast response to changes in temperature and protection against both gradual and sudden water pressure changes. All sliding parts and adjustment springs are isolated from the water flow by the leak proof diaphragms.

Adjustment _____

To adjust temperature setting, use wrench and turn adjusting screw on top of the spring housing. Turn counter clockwise to raise the temperature and clockwise to lower.

MANUAL OVERRIDE ____

 All valves may be manually flushed by inserting a screwdriver in openings at opposite sides of the spring housing and lifting the lower spring plate to open the valve. The valve adjustment is not affected by manual flushing.

- 1. Select the desired Bulb style for the appropriate valve series.
- 2. Select the Applicable Valve size.
- 3. Select the Temperature Range to reference the part number.

Example: For a 1" 2-Way application to control at 110°F, you could select our 800 Series valve and specify a 50M-203-1S thermostatic actuator (see Model 203 on right).
